

**Pre-Lesson Planning:**

Before planning your lesson, think about these questions, and write your answers in the boxes below.

|                                                                                                                                                                                                                                                                                                                                                                                |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p><b>1.</b> Where is this course located within a specific program? (i.e. first year elective? 2<sup>nd</sup> semester of first year? Etc.)</p> <p>2<sup>nd</sup> semester of 1<sup>st</sup> year.</p>                                                                                                                                                                        |
| <p><b>2.</b> What is the course outcome(s) that this lesson works/builds towards? <i>*Bloom's</i></p> <p>---Investigate organic compounds and organic chemical reactions and use various methods to represent the compounds.</p> <p>---Demonstrate an understanding of the structure, properties, and chemical behavior of compounds with each class of organic compounds.</p> |
| <p><b>3.</b> What are the objectives for this 1-hour lesson? (What will students be able to do by the end of this hour?) <i>*Bloom's</i></p> <p>-describe some impacts of alcohols on human health, and society.</p> <p>-use appropriate terminology including IUPAC nomenclature, to describe alcohols</p> <p>-create molecular models to represent simple alcohols</p>       |
| <p><b>4.</b> What week will this lesson occur during the semester?</p> <p>4<sup>th</sup> week</p>                                                                                                                                                                                                                                                                              |
| <p><b>5.</b> What was taught the week before?</p> <p>Aromatic Hydrocarbons</p>                                                                                                                                                                                                                                                                                                 |
| <p><b>6.</b> What will be taught next week?</p>                                                                                                                                                                                                                                                                                                                                |

|                                                                                                                                                                                                                                                                                                                 |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Chemical Properties of Alcohols and Reactions involving alcohols                                                                                                                                                                                                                                                |
| <b>7.</b> What accommodations / adaptations need to be considered/required in order to ensure an inclusive classroom? (i.e. captioning of videos, verbal and written instructions, extra handouts, slides posted in advance, UDL, etc.)<br><br>Modelling, Slides, videos, padlet                                |
| <b>8.</b> Back-up Plan – what will you do in case the photocopier is broken down? What if the technology or internet isn't working? What if you have forgotten your USB key? Etc.<br><br>Since I have teachers 'note I can teach on Blackboard. And I can make some modelling activity with molecular model kit |

**Stage 1: MOTIVATION** (Before teaching new content - prepares students for learning, activates prior knowledge, interest is created in the material, getting Ss engaged and ready for learning. For Ss, this stage answers the question: Why do I need/want to learn this???)

| Time   | Objective(s)                                                     | What will the teacher do?                                                                                                            | What will the students do?                             | Resources (handouts, weblinks, pwrpts, etc.)                                                                                                                         | Informal Assessment Feedback on learning                                                                         |
|--------|------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|
| 10 min | -describe some impacts of alcohols on human health, and society. | -Greetings<br>-Explain Objectives<br>-Explain shortly requirements<br>-Show video<br>-Guide the students during the drawing activity | -Watch the video<br>-Drawing the story about the video | <a href="https://youtu.be/DvliOQ4nsUM">https://youtu.be/DvliOQ4nsUM</a><br><br> | Student will understand that all alcohols are not same and will learn the hazardous effects of drinking Methanol |

**Lesson Plan (Introduction to Chemistry 2)****Name: Istikbal Turut**

|  |  |  |  |  |  |
|--|--|--|--|--|--|
|  |  |  |  |  |  |
|--|--|--|--|--|--|

**Stage 2: COMPREHENSION** (Content is taught using Active Learning strategies NOT traditional lecture)

| <b>Time</b> | <b>Objective(s)</b>                                                             | <b>What will the teacher do?</b>                        | <b>What will the students do?</b>                                                                                | <b>Resources</b>                                              | <b>Informal Assessment Feedback on learning</b>                                                                                                                                                                       |
|-------------|---------------------------------------------------------------------------------|---------------------------------------------------------|------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 20 Min      | -use appropriate terminology including IUPAC nomenclature, to describe alcohols | Teacher will instruct the lecture by using power points | Students will take their own note<br><br>Ask questions to the Teacher about the parts that they don't understand | <u>COMPREHENSION</u><br><u>20 MIN</u><br><br>(Ctrl and Click) | Student will learn how to distinguish alcohols from other organic compounds<br><br>Students will learn how to name the alcohols<br><br>Students will learn some important alcohols and their importance in daily life |

S

**Stage 3: PRACTICE** (Learners DO SOMETHING with what they are learning)

| Time              | Objective(s)                                          | What will the teacher do?                                                                                                                                                                            | What will the students do?                                                                                                                                                           | Resources                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Informal Assessment Feedback on learning                                                                                                                                                                     |
|-------------------|-------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 30 Min<br>(15+15) | -create molecular models to represent simple alcohols | <p>-Teacher will give instructions related to two different learning activity</p> <p>-Teacher will distribute activity materials</p> <p>-Teacher will divide students into groups for activities</p> | <p>Students will be a member of a group</p> <p>They will learn their roles in activities</p> <p>They will perform the activities</p> <p>They will upload their product to padlet</p> | <p><b>INSTRUCTIONS FOR ACTIVITY 1</b></p> <p>-prepare a ppt file including 5 slides (one is cover for name and group members, the other 4 for the important alcohols.</p> <p>1- Search some important alcohols (commercially or according to Daily usage)</p> <p>2- Write the name of 4 important alcohols</p> <p>3- For each alcohol prepare 1 slide</p> <p>4- Each slide should include</p> <ul style="list-style-type: none"> <li>-name of Alcohol</li> <li>-Picture of its structural formula</li> <li>-Name and Picture of any product that contains the alcohols.</li> <li>-write just only one short statement related to this specific alcohols</li> <li>5-Share your slide pictures with class by means of padlet.</li> </ul> <p><b>Padlet</b></p>  | <p>Students will practice how to form a alcohol molecular structure</p> <p>Student will practice how to name given alcohol</p> <p>Student will search some important alcohols and learn their importance</p> |

**OPTIONAL**

**Stage 4: Application** (Students apply what they have learned to 'real-world' problems. This is where final evaluation takes place. Students demonstrate their competency, knowledge and skills. It answers the question: Have they achieved the course outcome?)

**1.** When will this evaluation take place? (Week #?)

At the end of 6<sup>th</sup> week

**2.** How much is this evaluation worth? (Total marks out of 100)

20

- 3.** What is the 'authentic assessment/evaluation' students will do in order to show what they know'? (Revisit OBL Workshop #3 for some ideas.)

Students will form new molecular models by using molecular kits. And also they will explain why methanol is extremely dangerous and what the negative effects exist on human health.
