

Match the words in the first column to the best available answer in the second column.

_____ ionic bonding	1) combination of atoms formed by a covalent bond
_____ covalent bonding	2) group of covalently bonded atoms that act like a single atom when combining with other atoms
_____ chemical bonding	3) the electron in the outermost energy level
_____ ion	4) element whose atoms can form covalent bonds with another atom of the same element
_____ valence electron	5) the process of removing electrons and forming ions
_____ electron dot diagram	6) bonding that involves a transfer of electrons
_____ ionization	7) an atom that has become charged due to the loss or gain of electrons
_____ ionization energy	8) the energy needed for ionization
_____ electron affinity	9) a regular repeating arrangement of atoms
_____ crystal lattice	10) covalent substance whose molecules are very large and because the atoms involved continue to bond to one another
_____ diatomic element	11) diagram that uses the chemical symbol for an element surrounded by series of dots to represent the electron sharing that takes place in a covalent bond
_____ molecule	12) bonding that involves the sharing of electrons
_____ network solid	13) the tendency of an atom to attract electrons
_____ polyatomic ion	14) the combining of elements to form new substances

Answer Key:

- 6 - ionic bonding
- 12 - covalent bonding
- 14 - chemical bonding
- 7 - ion
- 3 - valence electron
- 11 - electron dot diagram
- 5 - ionization
- 8 - ionization energy
- 13 - electron affinity
- 9 - crystal lattice
- 4 - diatomic element
- 1 - molecule
- 10 - network solid
- 2 - polyatomic ion
